

- Blue beta\* and waist at IP8 before Todd applied his knob
  - H beta\*:  $0.65+0.02@-0.34+0.01$
  - V beta\*:  $0.72+0.04@-0.33+0.03$
- First knob trial:
  - H beta\*:  $0.6+0.02@-0.35+0.02$
- Second knob Trial:
  - H Beta\*:  $0.63+0.02@-0.15+0.01$
  - V beta\*:  $0.64+0.02@-0.36+0.01$

- coupling effect is not included
- non-linear effect from triplets due to the high amplitude oscillation?
- what's the cause of this amplitude modulation?
